Preface

DocFrame license types	xi
What's included with the DocFrame developer license?	xi
Requirements	xii
Hardware	xii
Software	xiv
Installing the files onto your hard drive	xv
Windows	xvi
Macintosh and UNIX	xviii
Configuring your machine for XSL processing	xx
Java	xx
XSL processor	xx
Parser	xxi
HTML Help Workshop	xxi
JavaHelp software	xxii
Conventions used in this book	xxii
Need help?	xxiii

Chapter 1: What's new in DocFrame version 2

Formatting template	1
Paragraph tags	1
Condition tags	2
EDD	2
Formatting rules	2
FileName attribute for chapter- and section-level elements	2
Id attribute	2
Structured application	3
Template	3
DTD	3

Read/write rules	3
Application definitions file	3
XSL stylesheets	3
JavaHelp	4
Modular design	4
Processing of conditional text	5
File naming	5
Variable changes	6
Splash pages	6
Sample files	6

Chapter 2: Development overview

DocFrame components	7
DocFrame dependencies	8
Planning DocFrame customization	11
Identifying structure changes	12
Modifying formatting	12
Updating the structured application	14
Modifying XSL transformations	14
Distributing updated application files	14

Chapter 3: Customizing the structure

What do I need to know before reading this chapter?	15
Adding and modifying elements	15
Naming new elements	16
Writing general rules	17
Writing attribute lists	19
Writing formatting rules	22
Using other available elements	24
Important things to consider when modifying the EDD	24
Ideas for customizing the EDD	26

Chapter 4: Modifying the template

What do I need to know before reading this chapter?	30
Modifying template fonts and formats	30

- Fixing missing fonts 30
- Adding new formats 33
- Modifying the template after changing the EDD 34
 - New top-level elements 34
 - Other new elements 37
 - Attributes in running header/footers 38
- Ideas for customizing the template 38

Chapter 5: Customizing XML export and import

- What do I need to know before reading this chapter? 41
- Defining structured applications in structapps.fm 42
 - DOCTYPE elements 42
 - Files that make up an application 42
 - External cross-references element 43
 - Modifying the application file 44
- Modifying the round-tripping of XML content 45
- Maintaining the template file 45
- Customizations in the DTD 45
 - Creating a new DTD 45
 - Custom entity definitions for user variables 46
 - Custom entity definitions for suppressed hyphenation, nonbreaking hyphenation, and nonbreaking spaces 47
 - Custom Table and TableCell attributes 47
- Customizations in the read/write rules 48
 - Rules for suppressed hyphenation, nonbreaking hyphenation, and nonbreaking spaces 48
 - Rules for index markers and cross-references 48
 - Rule for Title and Code line length 48
 - Rules for tables 49
 - Rules for graphics 49
 - Rules for book components 51
 - Rules for user variables 53
 - Controlling the DTD path statement 54
 - Creating a new read/write rules file 54
 - Checking read/write rules 55

- Processing conditional text during XML export 56
 - Conditional text handling in FrameMaker 7.0 56
 - Conditional text handling in FrameMaker 7.1 57

Chapter 6: Introduction to Extensible Stylesheet Language

- What do I need to know before reading this chapter? 60
- XSL versus XSLT 60
- Processing sequence in XSL 61
- Getting started 61
- XSL syntax rules 62
- Nodes and elements: they're not the same 63
 - Attribute nodes 63
 - Processing instruction nodes 63
 - Comment nodes 63
 - Text nodes 64
- Axis relationships 64
- Understanding context 65
- XSL concepts 67
 - Templates 67
 - Conditional statements 68
 - Creating output files 69
 - Variables 70
 - Grouping stylesheets 71
 - Functions 71
 - Saxon extension elements 74
- Overview of the DocFrame version 2 transformation files 74
 - Common files 75
 - Output-specific transformation files 75

Chapter 7: Customizing element transformation

- What do I need to know before reading this chapter? 79
- Processing and formatting paragraph-level and inline elements 79
 - Modifying the CSS files 80
 - Modifying inline elements 81
 - Modifying paragraph-level elements 82

- Modifying the JavaHelp transformation 83
- Processing table elements 84
- Processing graphic elements 85
 - Changing graphic file locations 88
 - Changing formatting of the caption 88
 - Changing graphic output format 89

Chapter 8: Controlling XSL pagination and navigation

- What do I need to know before reading this chapter? 91
- Modifying global navigation variables 91
- Understanding file naming and pagination 94
 - HTML file naming exceptions 95
 - HTML Help file naming exceptions 95
 - JavaHelp file naming exceptions 96
- Creating the splash page 96
- Understanding navigation bars 99
 - XSL details for HTML 100
 - XSL details for HTML Help 102
 - XSL details for JavaHelp 103
- Processing cross-reference elements 103
 - XML internal cross-references (versions 7.0 and 7.1) 105
 - External cross-references (version 7.1 only) 107
- Understanding hypertext processing 113

Chapter 9: Processing conditional text

- What do I need to know before reading this chapter? 115
- Transforming XML files from FrameMaker 7.0 115
- Transforming XML files from FrameMaker 7.1 115
 - Deleting conditional text tags during transformation 116
 - XSL details 117
 - DTD references in conditional processing 119

Chapter 10: Customizing the HTML transformation

- What do I need to know before reading this chapter? 122
- Generating the table of contents 122

- Creating the HTML index 124
 - Deleting <\$endrange> index markers 127
 - Calculating link destinations 128
 - Splitting index entries into individual index entries 128
 - Flagging “see” and “see also” references 130
 - Splitting individual index entries into nested elements 131
 - Writing results to a temporary result tree 132
 - Sorting index entries and writing them out to a temporary file 132
 - Concatenating (grouping) index entries and creating final output 134

Chapter 11: Customizing the HTML Help transformation

- What do I need to know before reading this chapter? 138
- Differences between HTML Help and HTML transformations 138
 - Global variables 139
 - Table of contents file (.hhc) processing 139
 - Index processing 141
 - Generating the project file 143
- Creating context-sensitive help 146
 - Setting up the mapping file (.h) file 147
 - Setting up the aliases.h file 148
 - Adding the header files to the project file 148
- Compiling HTML Help 148

Chapter 12: Customizing the JavaHelp transformation

- What do I need to know before reading this chapter? 149
- JavaHelp overview 150
- File naming 151
- CSS file 151
- Understanding linking in JavaHelp 152
- Generating the helpset file 153
- Creating the JavaHelp mapping file 154
- Table of contents processing 155
- Index processing 158
- Creating the splash (entry) page 159

- Implementing full-text search 160
- Implementing context-sensitive help 160

Appendix A: Template formats

- Paragraph tags 161
- Character tags 166
- Table tags 166
- Variables 167
- Cross-reference formats 168
- Markers 169
- Condition tags 169
- Master pages 170
- Reference pages 171

Glossary

Index
