

Adding a poster to Flash movies in FrameMaker

When you import a Flash movie (.SWF) file into FrameMaker 8, the resulting image is a big gray button.

Figure 1: No poster over Flash file

You can place a picture and even callouts on top of the Flash file to use as the poster that appears in the PDF and in print. When you create the PDF (using File > Save As PDF), the poster appears until you click on it. Then the Flash file moves to the top and plays.

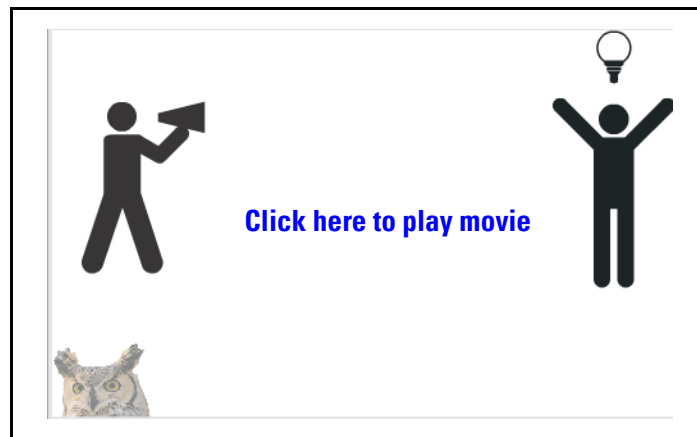

Figure 2: Picture and text over Flash file serve as poster
