

FrameMaker 8 and DITA

Technical Reference

FrameMaker 8 provides support for creating, editing, and publishing DITA 1.0 content. You can use FrameMaker to author and publish DITA content as high-quality print and PDF output, or you can create content elsewhere and use FrameMaker strictly for publishing print and PDF output. This document describes FrameMaker's DITA support and provides guidance on how you might best integrate DITA and FrameMaker.

NOTE: This reference assumes basic familiarity with XML, structured authoring, and DITA. For more information about these topics, refer to our white papers, "Structured authoring and XML" and "Assessing DITA as a foundation for XML implementation," both available at www.scriptorium.com/papers.html. The Scriptorium [wiki](#) provides free tutorials for structured and unstructured FrameMaker.
